1. The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.
2. Claims 40-64 are rejected under 35 U.S.C. 103(a) as being unpatentable over Jeffers et al (cited herein). The reference teaches a blade that appears to be inherently capable of receiving ultrasonic vibrational energy, as required in some claims. Thus, the blade of Jeffers appears to meet the limitation "ultrasonic blade" as also used in the claims. The blade of Jeffers can be seen to have all of the elements of the claims, but for curves or a camber on the first and second surfaces that define the blade cutting edge. On the other hand, it is conventional to provide a curved or cambered surface to the portion of a blade that defines the blade cutting edge. Note the prior art of record, for example. Thus it would have been obvious as a design expedient (obvious choice of design) or to provide increased strength to the cutting area of the blade, to provide first and second curves to the noted surfaces of the Jeffers blade.
